

Machine builders try their best to design and construct machines that operate at or above their customers expectations but, sometimes things don't work out the way they are planned.

So, what do you do? Usually a call to the machine manufacture helps but, not always. More money gets spent and your production numbers just aren't getting any better. Now what? More calls, more money, but, no improvement or worse.

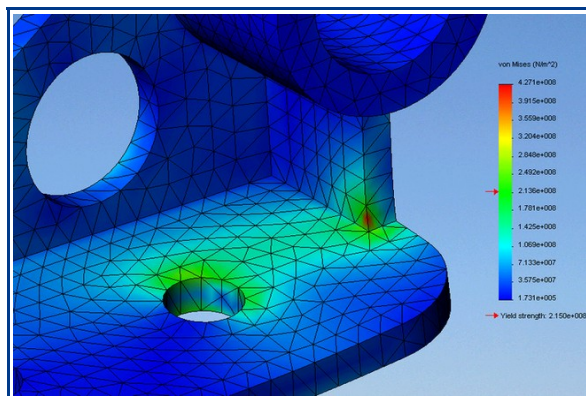

Sound familiar?

Your maintenance technicians are trying their best but you just can't keep applying "band-aids".

You need the right solution. That's where we can help.

With over twenty years of machine design and analysis experience, we have developed a systems approach to solving machinery problems. From small fabrication shops to large scale production plants, we have designed and worked with thousands of different types of machinery.

We can get to the source of problem and offer a solution that will get your production numbers where you want them.

Sometimes all it takes is knowing where to find the problem.

With over twenty years of providing companies with expert design and drafting services, our clients feel at ease knowing that their project is in the right hands.
